

Tailgate Application Aid

This sheet is to help eliminate any confusion about which gate the retail customer needs to order due to overlapping styles of OEM trucks at model change-over. Measure the *factory tailgate* at points A, B and C to confirm the proper fit for the customer's truck.

Point A is across the outside width of the gate, **2" down from the top, just under any molding or contour built into the OEM tailgate.** **Point B** is across the gate at the very bottom. **Point C** is the height of the gate (measure height of gate on end of gate not center).
