

The T&D Difference

T&D Competition [Rocker Arms](#) are the product of years of testing and refinement. T&D rockers are produced with computer aided design then CNC manufactured to ensure precision for every application. Extensive laboratory and on-track testing have proved that T&D rockers are the best.

LABORATORY TESTING

T&D tests every rocker arm design against the competition for weight, mass moment of inertia, deflection, and cycle durability. Through rigorous testing, T&D rockers have been continuously improved to be the lightest, most efficient, and most durable rocker arms on the market.

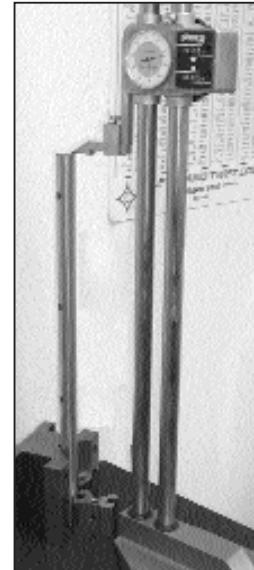

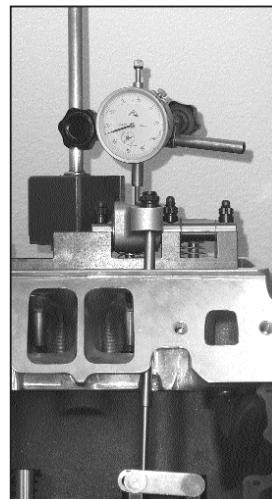

ON-TRACK TESTING

From the endurance engines of NASCAR stock car racing to the high revving motors of drag racing, T&D rocker arms have survived the torture tests. Top NASCAR Sprint Cup, Nationwide and Camping World teams rely on T&D rockers to do the job every weekend.

QUALITY ASSURANCE

Each part of a T&D rocker arm is inspected at every phase of production to assure the highest level of quality. T&D makes sure that our exacting tolerances are maintained at all times, to provide our customers the most consistent and durable rocker available.

BETTER by DESIGN

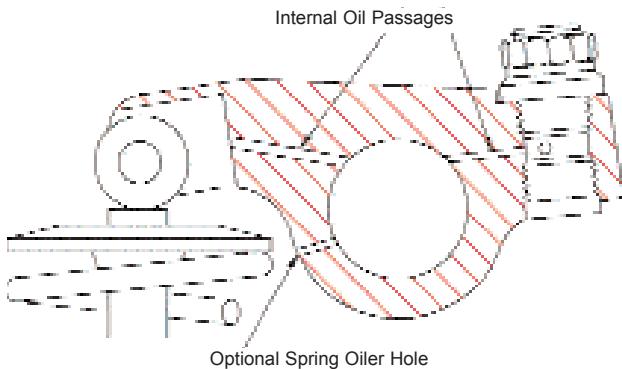

The T&D Difference

T&D leads the way with the finest, most advanced rocker arm on the market

PRESSURIZED OILING

T&D rocker arms have an oil passage built into each rocker arm to channel oil from the pushrod cup to the shaft bearings and then on to the roller tip.

7/16 DIAMETER ADJUSTER SCREW

T&D's world class adjuster screw and jam nut are the biggest in the business producing more thread contact area to positively secure lash settings. Each adjuster is broached for a big 3/16" socket to eliminate twisted hex keys. Jam nuts are heat-treated alloy steel to be the lightest and toughest around.

TECHNOLOGICAL ADVANCES

STRONGER SHAFTS

T&D's larger diameter shafts are made from 8620 steel, deep case hardened and tempered for the maximum of wear resistance and strength.

BETTER ALUMINUM

T&D uses 2024 aluminum made to our specifications for tensile and yield strength – 2024 has improved notch sensitivity, fatigue resistance, strength at elevated temperatures and chemical resistance.

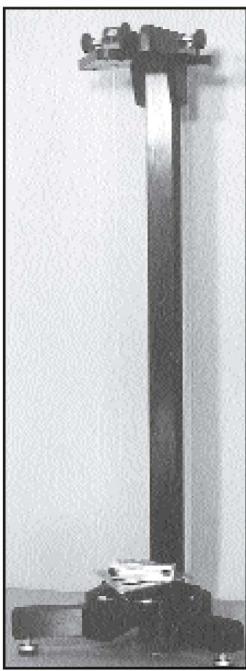

EASY INSTALLATION AND MAINTENANCE

Every T&D rocker system is designed with the racer in mind. Most applications require no head modifications. All the hardware and shims necessary to attach a rocker system are included. On models with individual shafts, rockers can be removed quickly for valve spring service.

REBUILDABLE

T&D rocker arms are manufactured so that every component can be removed without damaging the rocker. This allows us to replace any damaged components or replace the aluminum rocker body after its cycle limit has been reached.

The T&D Difference

COMPACT DESIGN

T&D rocker arms are designed around a simple lever system, which makes for the most compact rocker shape possible. A pure lever produces the greatest area under the lift curve.

MASS MOMENT OF INERTIA

Mass moment of inertia is the relationship between the center of gravity (CG) of an object with irregular geometry and the rotational axis. The further the CG is from the axis of rotation the higher the mass moment of inertia. The higher the mass moment of inertia, the more spring pressure needed to control the rocker arm instead of the valve.

For example, every gram that can be removed from the nose of a rocker arm – effectively lowering the mass moment of inertia – operational RPM goes up significantly.

T&D is the rocker industry leader in the testing of mass moment of inertia. All our rocker arms are compared to the competition using a tri-pillar suspension to ensure our rockers are the most rotationally efficient. Simply stated, T&D Machine Products produces the finest in shaft roller rocker technology anywhere at any price. Period.

EFFICIENCY of MOTION

LONG vs. SHORT

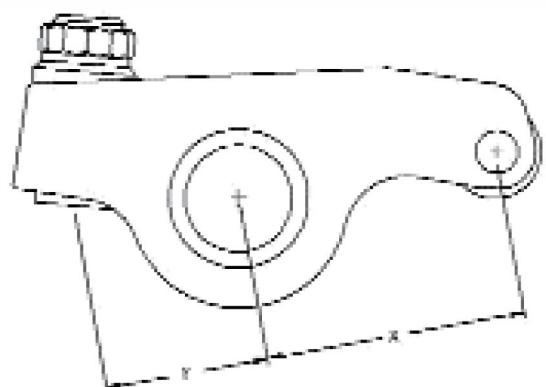

In a time when everyone is searching for a few more horsepower, all engine components, including the valve train and rocker arms, come under scrutiny. Our standard (length) rocker arm assemblies offer very low overall weight and low mass moment of inertia, as well as high strength and rigidity. Along with these standard length versions, we also offer longer fulcrum length rockers. These longer rockers offer a slight advantage in roller travel across the valve tip (see chart) and are absolutely necessary when very high ratios are used.

Rocker	Roller travel for 0.650" lift	Difference
1.450	0.037"	
1.520	0.035"	5%
1.600	0.033"	6%
1.650	0.032"	4%
1.750	0.030"	6%
1.850	0.029"	4%

Due to cylinder head design limitations, long fulcrum sets are not available for all applications.

ROCKER RATIOS

Rocker arm ratio is determined by the relationship between the pushrod cup, the rocker shaft centerline, and the roller tip. T&D machines these critical dimensions to exacting tolerances to ensure accurate rocker arm ratios. T&D calculates rocker arm ratios based on actual lift. This means that a given rocker arm ratio will produce the proper lift at the valve.

2000-60-50

1.50:1 Exhaust Rockers
1.60:1 Intake Rockers
Part Number for Small Block Chevy V-8 Rocker Assemblies

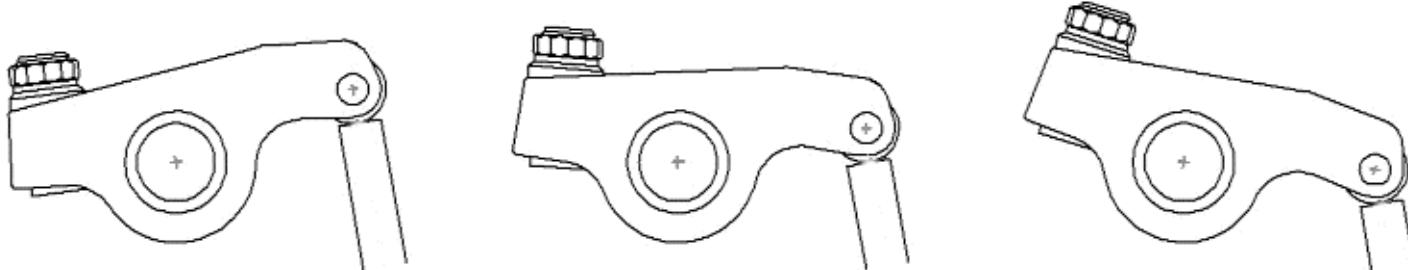

PART NUMBER CODE

Ratios for T&D rocker systems are specified by part number suffixes. The first suffix is the intake ratio; the second is the exhaust ratio. The example to the left is a typical part number for a small-block Chevrolet rocker system – it has 1.60:1 intake rockers and 1.50:1 exhaust rockers.

VALVETRAIN HANDBOOK

ROCKER GEOMETRY

Rocker arm geometry is critical to valvetrain stability, durability and accuracy. T&D rocker assemblies include detailed instructions, a shaft height tool and a mock-up pushrod (upon request) to easily achieve the

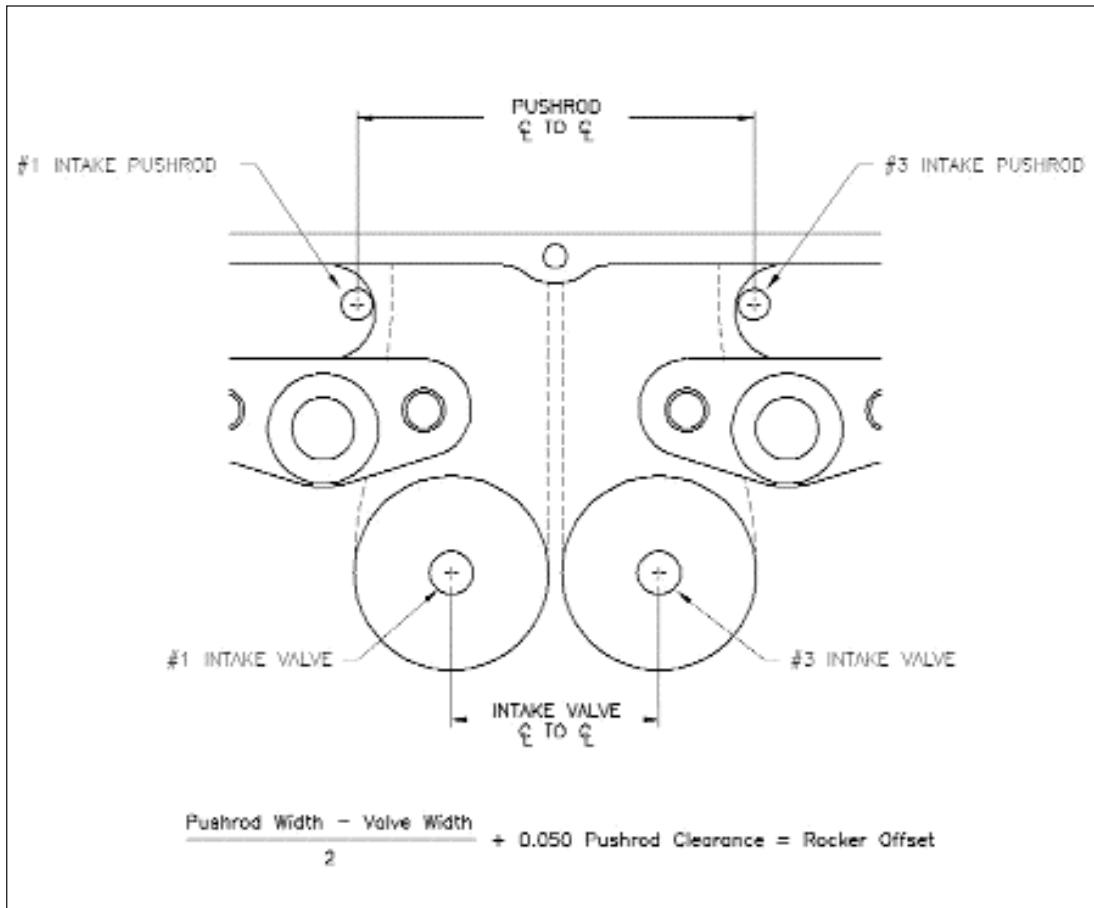

correct geometry. The relationship between the shaft height and the tip of the valve is a significant factor in valvetrain geometry. The correct shaft centerline position will locate the roller tip at the same position on the valve stem tip when the valve is closed and when it is at full lift. At the valve-closed position, the roller should be slightly behind the valve stem centerline. The roller tip should sweep across the tip to a position slightly ahead of the stem centerline as the valve opens to the half-lift position, sweeping back to its starting point behind the centerline at full lift. This keeps the roller travel centered on top of the valve, with the least possible movement, reducing valve guide wear to a minimum.

REQUIRED OFFSET MEASURING GUIDE

(For Wedge Heads Only)

- 1) Measure the center line distance between the #1 and #3 intake valves. This is the valve width.
- 2) Measure the distance from the centerline of the #1 intake pushrod to the centerline of the #3 intake pushrod at the approximate height of the rocker arm. This is the pushrod width.
- 3) Subtract the result of No. 1 (above) from the result of No. 2.
- 4) Divide this answer by 2. This is the minimum offset.
- 5) Add 0.050 minimum for pushrod clearance. This is the required offset.

T&D offers a wide range of rocker arm offsets and configurations to suit every application.

VALVETRAIN HANDBOOK

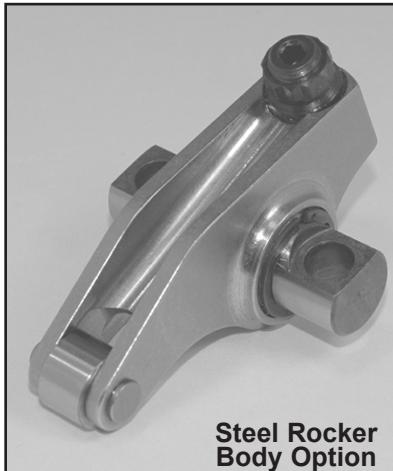

Rocker Option Guide

Standard T&D Rocker

Lightweight Option

Steel Rocker Body Option

Following are the most popular T&D rocker arm options to help in choosing the correct part for your application. For further information, please call.

0720 SPRING OIL HOLE OPTION An optional 0.040 diameter hole is drilled through the rocker body to provide a cooling jet of oil directly on the spring. As the rocker arm travels through its arc, the spring is sprayed with oil, which cools and lubricates the spring, improving valve spring reliability.

0727 STEEL ROCKER OPTION In many T&D rocker systems, where the need for even more strength or longevity, intake, exhaust or both aluminum bodies can be replaced with steel rocker arms. These steel replacements have been found to have decreased deflection, and can be machined to weights within a few grams of their aluminum equivalent.

0728 SHOTPEENED ROCKER OPTION Shotpeening removes residual stress risers in the surface of the body. This increases the fatigue strength of the aluminum improving cycle life of the rocker arm.

0730 LIGHTWEIGHT ROCKER OPTION Lightweight rockers are strategically machined and cycle tested to remove weight without affecting durability. This option consists of a machined slot down the top of the rocker. Lightweighting provides approximately 6% reduction in weight and 2-1/2% reduction in mass moment of inertia.

Shown are all the components that make up the needle bearing roller tip.

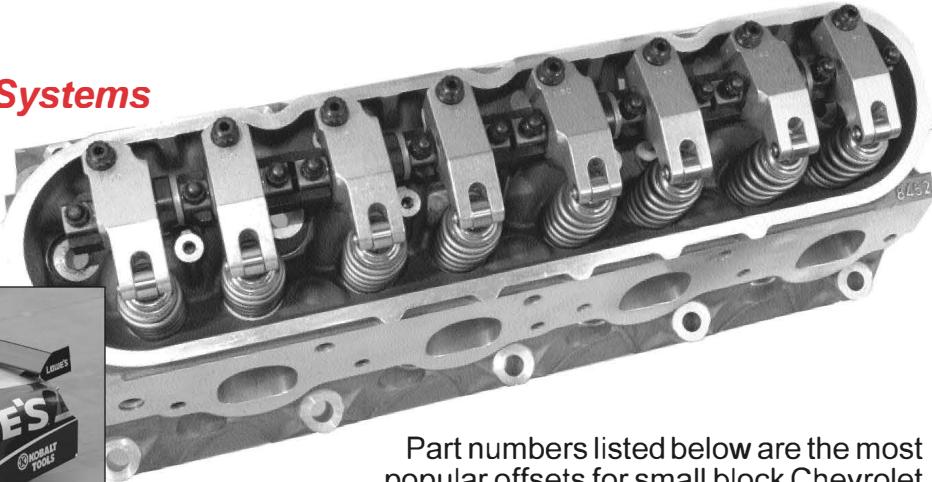

0731 NEEDLE BEARING TIP OPTION For high lift/high spring rate and endurance applications, all T&D rockers can be equipped with needle bearing roller tips. Needle bearing tips reduce friction between the valve stem and roller tip. Reduced rolling resistance significantly reduces valve guide wear in all applications.

ALUMINUM STAND OPTION In order that we may supply weight conscious racers with the absolute lightest product available, T&D Machine Products offers aluminum stands for a limited number of applications at no additional cost! They offer a weight savings of more than 50% over their steel counterparts.

CUSTOM SERVICES T&D Machine Products offers full custom services for rocker arms. Whether that means a special ratio or offset, or a complete set of shaft roller rockers for even the most unusual engine or combination, T&D can handle the job. T&D offers design and engineering for rocker systems on all kinds of cylinder heads.

Small Block Rocker Systems

Part numbers listed below are the most popular offsets for small block Chevrolet rocker systems. They are available on-center (zero) to 0.775 off-set.

SportComp Rocker Systems for SB/BB Chevy and SB Ford

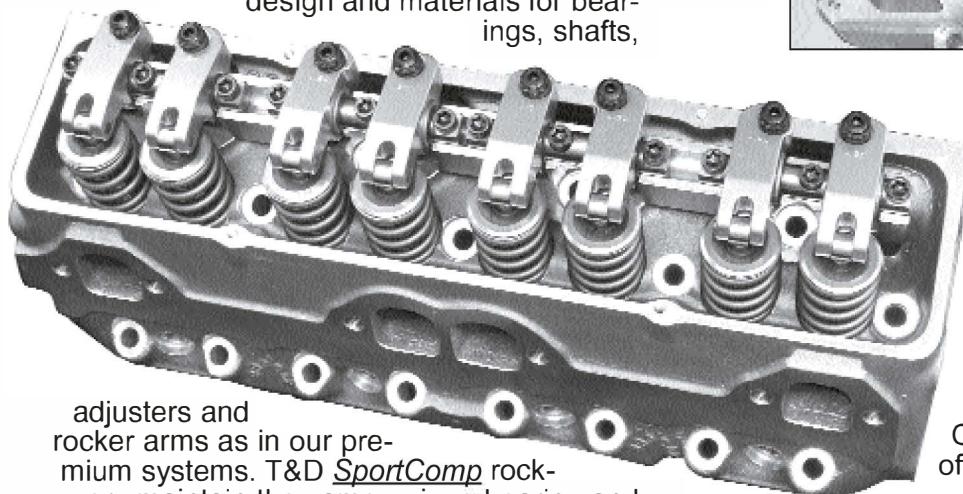

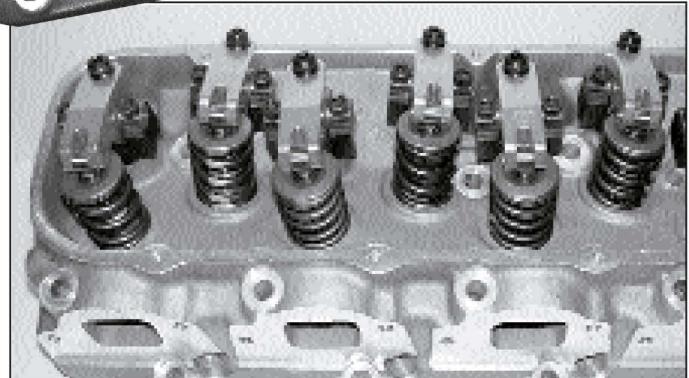

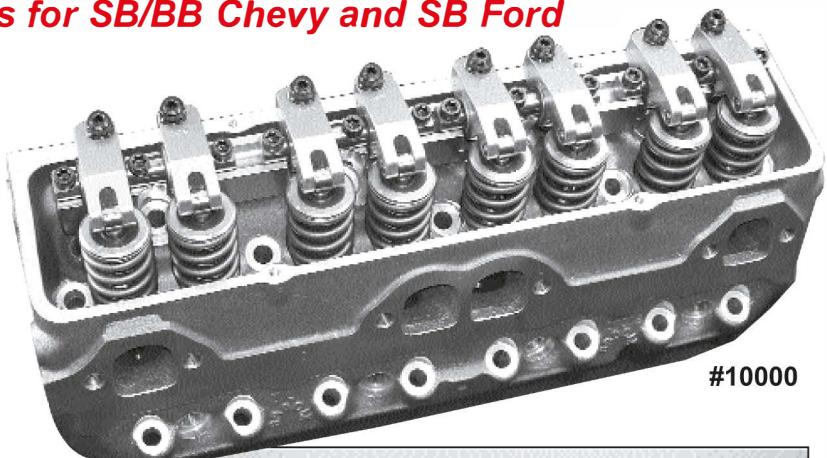

For the budget conscious racer, T&D Machine Products is pleased to offer a shaft rocker system that incorporates many design features of our premium product at a price comparable with stud-mount rockers and the required guide

Features & Benefits of T&D *SportComp* shaft roller rockers:

- Fixed fulcrum
- Lighter
- Higher RPM potential
- Easier valve lash adjustment
- More consistent valve lash adjustment
- No stud girdle to work around
- No guide plates
- Uses standard head bolts or studs
- Torque heads on SB Chevy/Ford w/o removing rockers
- No hidden costs or extra pieces to buy
- Priced just slightly above stud mount rockers

plates, girdles and hardware that go with them. *SportComp* provides sportsman racers with the many benefits of a shaft mount rocker system at significant cost savings.

T&D's *SportComp* systems utilize the same design and materials for bearings, shafts,

adjusters and rocker arms as in our premium systems. T&D *SportComp* rockers maintain the same unique bearing and adjuster sizes as well. And there are no valve spring pressure limitations. To keep costs

down we've limited the number of available ratios and offsets, eliminated the internal rocker oiling and incorporated less expensive retention hardware. Coupled with advanced machining capability, these features have allowed T&D to offer absolutely the finest sportsman shaft rocker available to today's racer!

Available for popular small block Chevrolet and Ford and big block Chevrolet cylinder heads. Also, we now offer the *SportComp* in a .220-offset that fits popular entry-level 23-degree aluminum cylinder heads from manufacturers such as AFR, Brodix, Dart and Edelbrock.

Applications: T&D *SportComp* shaft roller rockers are a direct bolt-on to many cylinder heads, including the following. Check with sales for others:

Part No. 10000 Chevy small block

Ratios 1.50/1.50, 1.60/1.50, 1.60/1.60

Chevy Iron Bowtie, Chevy 461/492; Brodix Track 1, Dart Iron Eagle, World Products Sportsman, Pro Topline Iron Lightning

Part No. 10001 Chevy small block (.220 offset)

Ratios 1.50/1.50, 1.60/1.50, 1.60/1.60

Most 23-degree aluminum heads such as AFR, GM Bowtie, Brodix, Canfield, Dart, Edelbrock, World Products, etc.

Part No. 10010 Chevy big block

Ratios 1.70/1.70, 1.75/1.75, 1.75/1.70

Chevy, Brodix Big Brodie; Dart BB, Pro 1; Canfield 800

Part No. 10020 Ford small block

Ratios 1.60/1.60, 1.70/1.60, 1.70/1.70

Ford 289/302; Brodix Track 1F; AFR; Edelbrock 302, Victor Jr.; Dart Ford

Components and Spare Parts for Rocker Assemblies

COMPONENT PARTS

T&D offers service parts for every rocker system we produce. The following is a list of our most popular component parts. Please call our tech department for assistance with products not shown below.

STANDS

Stands are available separately. Following is a list of the most popular stands. However, due to the minor differences between rocker-mounting stands, it is best to order them with assistance from a T&D sales representative.

00010	SBC, standard valve spacing
00012	SBC, S/S, A spacing, 1.520 rocker
00013	SBC, S/S, +.100, A spacing, 1.520 rocker
00015	SBC, standard valve spacing, +.100
00030	SBC, 40/60 valve spacing
00050	SBC, Brodix -12, Dart 17°/14°
00054	SBC, Brodix GB 2200/2300
00058	SBC, Brodix GB 2000
00060	SBC, GM, Dart, Edelbrock 18° w/1.650 fulcrum
00081	SBC, 40/60 valve spacing, + .100
00110	SBC, GM, Dart, Edelbrock 18° +.100 w/1.650 fulcrum
00150	SBC, GM, Dart, Edelbrock 18° w/1.520 fulcrum
00180	SBC, GM, Dart, Edelbrock 18° +.100 w/1.520 fulcrum
00260	SBC, Brodix 18° Clone
00279A	SB2.2 1.750 intake/1.850 exhaust
00480	Olds14° Wide Int for 1.850 long rocker
00481	Olds14° Narrow Int for 1.850 long rocker
00482	Olds14° Exhaust for 1.850 long rocker
00483	Olds14° for 1.850 Exhaust +.100 long rocker
10200	SBC SportComp
10220	SBF SportComp
00522	BBC Duke/Chief 18° Wide Int
00523	BBC Duke/Chief 18° Narrow Int
00524	BBC Duke/Chief 18° Exhaust
00525	BBC Duke/Chief 18° Wide Int +.100
00526	BBC Duke/Chief 18° Narrow Int +.100
00527	BBC Duke/Chief 18° Exhaust +.100
00560	BBC 1-piece intake
00561	BBC 1-piece intake, + .125
00562	BBC 1-piece intake, + .250
00563	BBC Exhaust, for 1-piece intake
00564	BBC Exhaust, for 1-piece intake +.125
00565	BBC Exhaust, for 1-piece intake +.250
00566	BBC Dart Exhaust, for 1-piece intake
00567	BBC Dart Exhaust, for 1-piece intake +.125
00577	BBC Dart 18° Exhaust
00578	BBC Dart 18° Intake
00650	BBF 429-460 intake and exhaust
00715	SBF 1-piece Yates w/1.520 rockers
00725	SBF 1-piece Yates w/1.650 rockers
00787	SBF TFS/N351 Ford 302
00790	Ford FE
00795	Ford FE sub plate
00841	SBM Dodge P7 for 1.850 intake and exhaust
00905	392 Hemi
00910	Viper V-10 Gen I & II head
00920	SBM W-2, W-5
00922	SBM W-9
00950	Edelbrock Pontiac 455

SHAFTS

0200	0.625 x 4.150 o.a.l.
0201	0.625 x 4.010 o.a.l.
0202	0.625 x 4.320 o.a.l.
10300	0.625 x 4.020 o.a.l. (<u>SportComp</u> only)

0210	0.625 x 2.010 o.a.l.
0219	Production V-6
0240	Buick 455 V-8 Solid
0269	Chrysler 440
0270	B-1 Single Shaft
0271	0.625 x 2.140 o.a.l.
0275	0.625 x 3.995 o.a.l.
0280	0.625 x 3.240 o.a.l.
0282	0.625 x 2.740 o.a.l.
0283	0.625 x 2.185 o.a.l.
0284	0.625 x 2.770 o.a.l.
0285	0.625 x 2.530 o.a.l.

ADJUSTERS AND JAM NUTS

03100+	Adjuster 7/16-20 x 1.130 w/shoulder 5/16 cup
03140#	Adjuster 7/16-20 x 1.130 w/thru hole 5/16 cup
03150*	Adjuster 7/16-20 x 1.130 w/shoulder 5/16 cup
03152	Adjuster 7/16-20 x 1.130 w/shoulder 3/8 cup
03170	Adjuster 3/8-20 x 1.075 w/shoulder 5/16 cup
03171	Adjuster 3/8-24 x 1.250 w/thru hole 5/16 cup
03172	Adjuster 3/8-24 x 1.250 w/thru hole 3/8 cup
03173	Adjuster 3/8-24 x 1.150 w/shoulder 5/16 cup
03200	Adjuster Jam Nut 9/16 Hex, 7/16-20 (Buick only)
03210*	Adjuster Jam Nut 12-pt steel, 7/16-20
03211	Adjuster Jam Nut 12-pt aluminum, 7/16-20
03250	Adjuster Jam Nut 12-pt steel, 3/8-24
03251	Adjuster Jam Nut 12-pt aluminum, 3/8-24

*Fits most T&D shaft systems except Buick and Hemi

+Fits Buick

#Fits Hemi and SportComp

HARDWARE

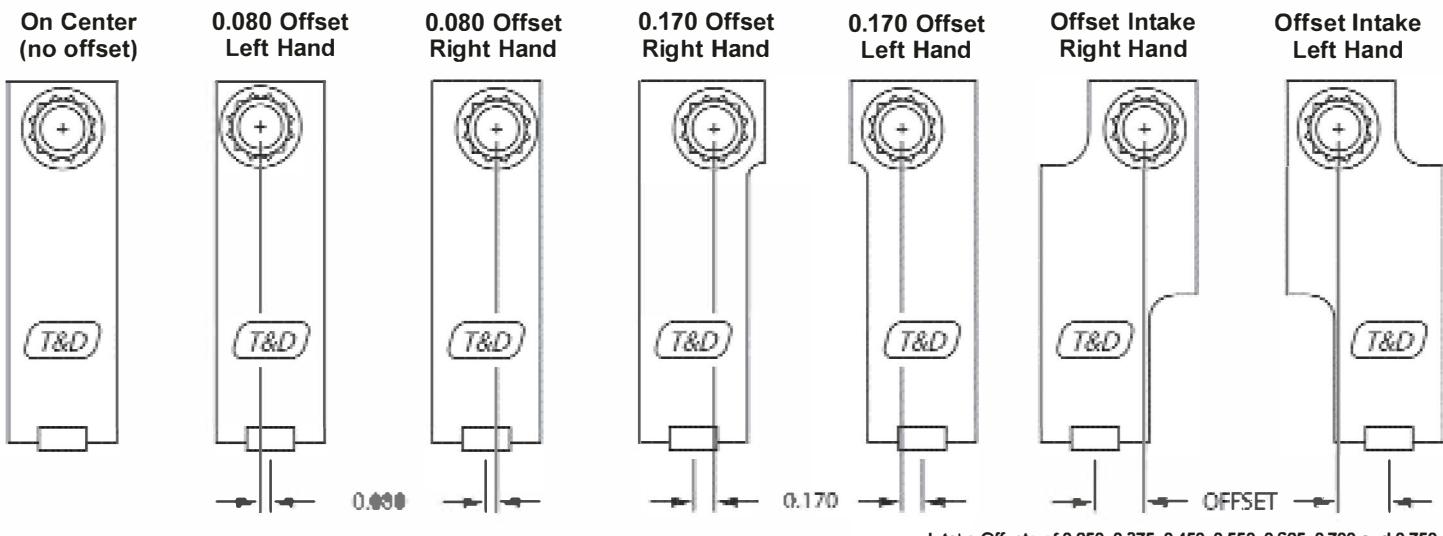

05020	Hold Down Stud 5/16-18/24 x 2.700
05051	Hold Down Stud 5/16-18/24 x 1.890 w/starter
05060	Hold Down Stud 3/8-16/24 x 2.250
05080	Hold Down Nut 5/16-24, 1/2 Hex, Grade 8
05090	Hold Down Nut 3/8-24, 5/8 Hex, Grade 8
05105	Shaft Bolt 5/16-18 x 1-1/4 12-pt, ARP 2000
05110	Shaft Bolt 5/16-18 x 1 12-pt
05120	Shaft Hold Down Nut 5/16-24 12-pt
05125	Shaft Hold Down Nut 5/16-24 12-pt alum
05131	Shaft Bolt 5/16-18 x 1-1/8 Torx Head
05200	Stand Bolt 7/16-14 x 3/4 12-pt flange bolt
05205	Stand Bolt 7/16-14 x 7/8 12-pt flange bolt
05210	Stand Bolt 7/16-14 x 1 12-pt flange bolt
05220	Stand Bolt 7/16-14 x 1-1/4 12-pt flange bolt
05225	Stand Bolt 7/16-14 x 1-1/2 12-pt flange bolt
05230	Stand Bolt 7/16-14 x 1 5/8 12-pt low head
05231	Stand Bolt 7/16-14 x 7/8 5/8 12-pt low head
05232	Stand Bolt 7/16-14 x 1-1/4 5/8 12-pt low head
05233	Stand Bolt 7/16-14 x 3/4 5/8 12-pt low head
05234	Stand Bolt 7/16-14 x 1-1/2 5/8 12-pt low head
05235	Stand Bolt 7/16-14 x 1-1/8 5/8 12-pt low head
05500	Roll Pin 1/4 x 3/4
05507	3/16 x 3/4 dowel pin
05790	Retaining Ring 5/8 dia.
05810	Retaining Ring 13/16 dia.
0660	5/8 Shaft Side Shim (specify thickness by dash number)

STAND SHIM KITS

05350	SB Stand Shim 0.060
05360	SB Stand Shim 0.030
05400	SB Stand (8 each 0.060 & 0.030)
05420	Big Duke/Big Chief (16 each 0.045)
05450	BBC 1-piece intake, BBF (16 each 0.080 & 0.040)
05451	BBC w/dowel pin (16 each 0.080 & 0.040)
05460	SBF Yates (16 each 0.060 & 0.030)
05480	BBC Brodix w/dowel pin (16 each 0.060 & 0.030)

OFFSET GUIDE

Component Parts - ROCKER ARMS

Note: The following is a partial list of the rocker arms and associated hardware available from T&D. Please contact a T&D sales representative to help in choosing the rockers, shafts and hardware for your application.

Rocker on Shaft denotes rocker with shaft, retaining rings and shims included.

PROS denotes Pairs of Rockers On Shafts – intake rockers assembled on shafts with standard offset exhaust rockers. Shims and retaining rings included.

Part No. Description

1450 ROCKERS (1.450 Fulcrum Length)

Available Ratios: 1.45, 1.50, 1.55, 1.60, 1.65, 1.70, 1.75, 1.80

Individual Rockers – 1450

11-1000	Rocker Arm - 0.080 Offset LH

- 15-1501 Rocker Arm - 0.170 Offset LH
- 15-1502 Rocker Arm - 0.170 Offset RH
- 15-1504 Rocker Arm - 0.080 Offset LH
- 15-1505 Rocker Arm - 0.080 Offset RH
- 15-1536 Rocker Arm - 0.750 Offset LH (Big Chief/Duke)
- 15-1537 Rocker Arm - 0.400 Offset RH (Big Chief/Duke)

Rockers on Shafts – 1750

- 15-1560 Rocker on Shaft - On Center (0210 Shaft)
- 15-15601 Rocker on Shaft - On Center (0283 Shaft)
- 15-1577 Rocker on Shaft - 0.750 Offset LH (Big Chief/Duke)
- 15-1578 Rocker on Shaft - 0.400 Offset RH (Big Chief/Duke)

1850 ROCKERS (1.850 Fulcrum)

Available Ratios: 1.60, 1.65, 1.70, 1.75, 1.80, 1.85, 1.90, 1.95, 2.00

Individual Rockers – 1850

- 16-1526 Rocker Arm - On Center
- 16-1527 Rocker Arm - 0.170 Offset LH

Component Parts - ROCKER ARMS

Part No.	Description
16-1528	Rocker Arm - 0.170 Offset RH

Rockers on Shafts – 1850

- 16-1563 Rocker on Shaft - On Center (0210 Shaft)
- 16-1564 Rocker on Shaft - 0.170 Offset LH (0210 Shaft)
- 16-1565 Rocker on Shaft - 0.170 Offset RH (0210 Shaft)
- 16-1579 Rocker on Shaft - SAR 14.5 Deg. Exhaust
- 16-1580 Rocker on Shaft - Olds 14, Wide Intake
- 16-1581 Rocker on Shaft - Olds 14, Narrow Intake
- 16-1582 Rocker on Shaft - Olds 14/BB Ford Yates, Exhaust

2000 ROCKERS (2.000 Fulcrum)

Available Ratios: 1.60, 1.65, 1.70, 1.75, 1.80, 1.85, 1.90, 1.95, 2.00

Individual Rockers – 2000

- 17-1510 Rocker Arm - On Center

Rockers on Shafts – 2000

- 17-1585 Rocker on Shaft - On Center (0210 Shaft)
- 17-1586 Rocker on Shaft - 0.170 Offset LH (0210 Shaft)
- 17-1587 Rocker on Shaft - 0.170 Offset RH (0210 Shaft)

PRODUCTION V-6 ROCKERS (1.390 Fulcrum)

Available Ratios: 1.45, 1.50, 1.55, 1.60, 1.65, 1.70

- 10-1300 Rocker Arm - Prod. V-6/V-8, 0.080 Offset LH
- 10-1301 Rocker Arm - Prod. V-6/V-8, 0.080 Offset RH

STAGE II/DART BUICK SB ROCKERS (1.710 Fulcrum)

Available Ratios: 1.50, 1.55, 1.60, 1.65, 1.70, 1.75, 1.80, 1.85, 1.90, 1.95, 2.00

- 10-1400 Rocker - Stage II V-6, Int, Cup Adjuster
- 10-1401 Rocker - Stage II V-6, Exh, Cup Adjuster
- 10-1402 Rocker - Stage II V-6, Int, Ball Adjuster
- 10-1403 Rocker - Stage II V-6, Exh, Ball Adjuster
- 10-1410 Rocker - Dart SB V-8, Int
- 10-1411 Rocker - Dart SB V-8, Exh

392 HEMI (Alan Johnson, Webster, etc.)

- 18-1592 Rocker on Shaft - Intake
- 18-1593 Rocker on Shaft - Exhaust

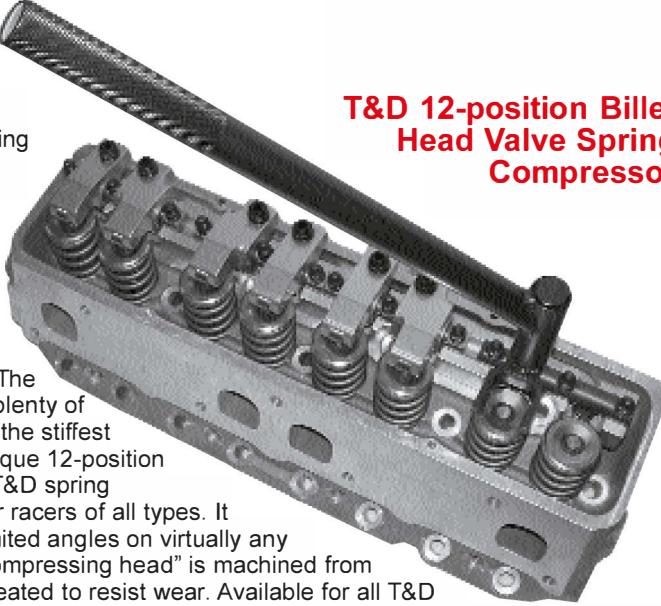

Legend for Footnotes

- 1 Most common system for this cylinder head
- 2 Other standard offsets available for this cylinder head
- 3 All required mounting hardware supplied with system
- 4 Non-returnable special-order product
- 5 Long fulcrum set available for this application
- 10 Bolt-on system, no machine work required
- 11 Requires major modification of cylinder head
- 12 Requires machine work not typically done at home
- 13 May require minor clearancing
- 14 Req'd machine work is compatible with other mfg's rockers
- 15 Req'd machine work alters head for use with our rocker system only
- 16 Requires drilling and tapping stand mounting holes to larger size
- 17 Requires drilling and tapping of additional mounting holes
- 20 Requires stands to be welded after fitment
- 30 May require fabricated valve cover
- 31 Requires Moroso valve cover # 68335, 68417 or equivalent
- 32 Requires valve cover spacer
- 33 Will work with factory valve cover
- 34 Requires tall valve cover
- 35 Requires GM valve cover p/n 10134319 or equivalent
- 40 Offset lifter required for most applications
- 41 On-center lifter acceptable for most applications
- 50 For use with 5/16" pushrod
- 51 For use with 3/8" pushrod
- 55 Uses Chevy-style ball-ball pushrod
- 60 For use with stock/factory-style block
- 61 For use with SB2 block
- 62 For use with R-series 48-degree lifter block
- 63 For use with 9.200" deck height. Call T&D for other deck heights
- 70 Requires oil system modification to pushrod or spraybar oiling
- 71 Requires pushrod oiling
- 72 Requires spraybar oiling
- 73 Uses OEM-style through the shaft oiling
- 80 For ratios 1.70 and higher
- 81 For ratios 1.65 and lower
- 85 Maximum 1.70 ratio
- 86 Maximum 1.75 ratio
- 87 Maximum 1.80 ratio
- 88 Maximum 1.85 ratio
- 90 Head available with or w/o outer cast stand boss. Verify version
- 101 For use with maximum 1.375" spring diameter
- 102 For use with maximum 1.450" spring diameter
- 103 For use with maximum 1.500" spring diameter
- 104 For use with maximum 1.550" spring diameter
- 109 Will clear most common spring diameters
- 120 Not for use with head studs
- 130 one-piece stand design
- 131 Individual stand design
- 132 One-piece intake stand design
- 133 For use with OEM stands/pedestals
- 134 Paired stand design
- 141 6-cylinder system
- 142 4-cylinder system

TOOLS

A heavy-duty T&D spring compressor makes it easy to inspect and change valve springs on an assembled engine, especially when proximity of firewall, roll cage, a tall intake manifold or blower gets involved. The long handle provides plenty of leverage to compress the stiffest of springs. It is the unique 12-position head that makes the T&D spring compressor a must for racers of all types. It allows for nearly unlimited angles on virtually any cylinder head. The "compressing head" is machined from billet steel and heat-treated to resist wear. Available for all T&D fulcrum and shaft rocker combinations. A dummy shaft is included.

07001	1.450/1.520 SB (3-hole shaft)
07002	<u>SportComp</u> only SBC/SBF
07011	1.600/1.650 (3-hole shaft)
07021	1.650 BBC, Cleveland/Yates Ford (2-hole shaft)
07031	B-1 (3/4 shaft)
07041	Buick Stage II V-6 and V-8
07042	Buick Production V-6
07051	1.850 Olds 14, BBF (Yates C460/D460)
07061	1.650 Big Chief, Big Duke
07065	1.750 Big Chief, Big Duke
07081	1.520 Ford Yates (2-hole shaft)
07091	1.750/1.850 SB2.2, P7 (2-hole shaft)
07100	Sonny's Chevy Hemi
07110	426 Hemi (Ray Barton)
07115	392/426 Hemi

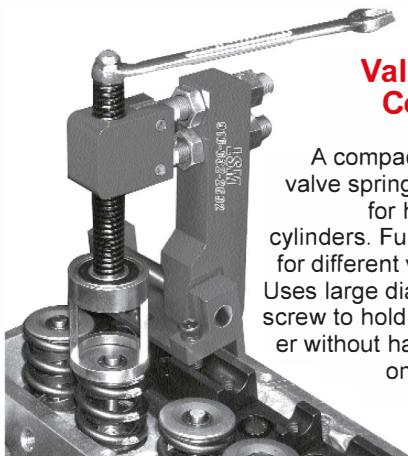

T&D 12-position Billet Head Valve Spring Compressor

LSM Valve Spring Checker

A hydraulic spring pressure tester for fast, accurate spring rate inspections without removing the spring or rocker from the head. It will work with a wide variety of offsets and pivot points, even on stock or stud-mount rockers. Can be calibrated to match your bench spring checker.

11080 LSM Valve Spring Checker

LSM Valve Spring Compressor

A compact hands-free valve spring compressor for hard to get at cylinders. Fully adjustable for different valve angles. Uses large diameter Acme screw to hold down retainer without having to hang on to a handle.

0770	LSM SB
0771	LSM BB
0772	LSM Ford Yates
0773	LSM FE Ford
0774	LSM Big Chief/Big Duke (deluxe)
0776	LSM Big Chief/Big Duke (standard)
0777	LSM B-1, 5/8 shaft
0778	LSM B-1, Single Shaft (direct to head)

2-in-1 Valve Lash Wrench

When you tire of manipulating a box-end wrench, an Allen wrench and a feeler gauge simultaneously during valve lash setting procedures, try T&D's 2-in-1 Valve Lash Wrench. It'll gain you an extra hand and quite a bit of time.

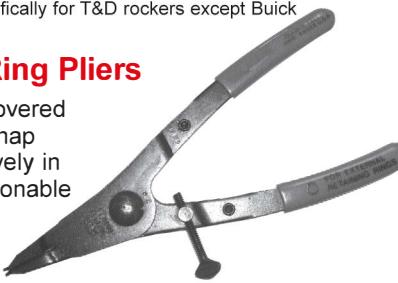

- *11020 2-in-1 Valve Lash Wrench (1/2 x 3/16)
- 11021 2-in-1 Valve Lash Wrench (5/32 x 7/16)

*Specifically for T&D rockers except Buick

High Quality Snap Ring Pliers

Here's a tip we want to pass on. We discovered these great snap ring pliers that fit T&D snap rings perfectly and now use them exclusively in our shop. They are good quality for a reasonable price.

11025 Snap Ring Pliers

LSM Valve Lash Adjusting Torque Wrench

The LSM TQ-100 is combination precision torque wrench and valve adjustment tool. No longer should there be a concern over proper torque settings of the rocker arm adjuster jam nuts. It is very important to torque these adjuster jam nuts properly when setting valve lash. Over torquing can cause cracking and failure of adjusters, nuts or even rocker bodies. Under torquing can result in sloppy lash settings, an adjuster nut coming loose and any number of broken parts. The LSM TQ-100 simplifies making precision valve lash settings by properly torquing adjuster nuts every time. Will fit most popular rocker arm brands. A 3/8-drive 12-point socket not included.

TOOLS

Pinion Depth Checker

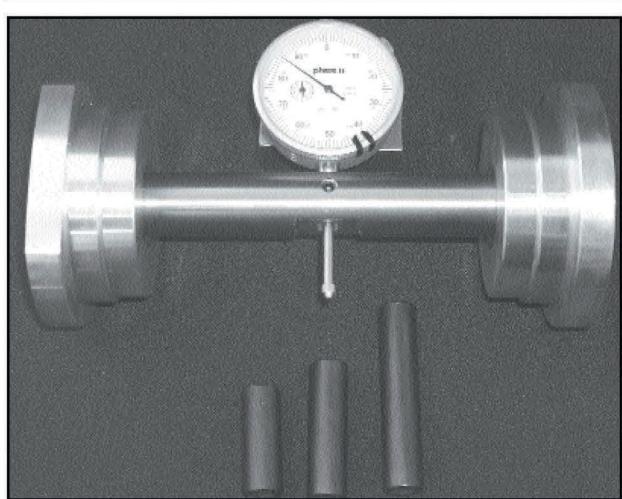

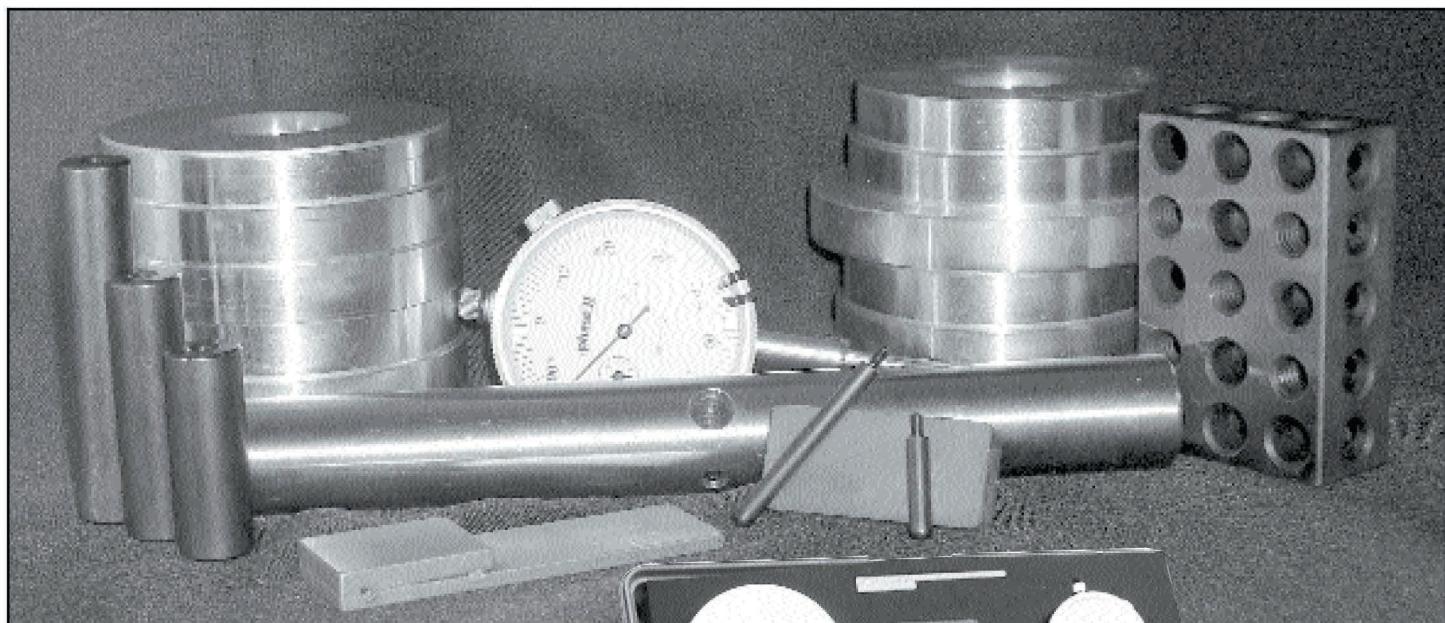

PINION DEPTH CHECKER

Set up your rearend the right way with a T&D Pinion Depth Checker! This is an indispensable tool whether installing one gearset a year or a dozen. It's easy to get a perfect tooth contact pattern with a T&D pinion depth checker – far easier than the old trial and error methods. Installing the pinion at the correct depth extends gear life and reduces power-robbing friction. Comes in a handy high-impact resistant carrying case.

- 11000 Standard Pinion Checker for GM 10/12-bolt, and Dana 60.
- 11001 Deluxe Pinion Checker for above differentials, plus Ford 8", 8.8", 9", GM 9.5/10.5 14-bolt, Mopar 8-3/4", early GM "B", "P" and "O" and Dana 30-70, etc.

A Perfect Way to Set-up a Wide Variety of Differentials

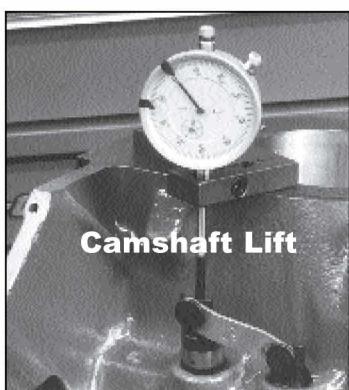

TOOLS

Engine Blueprinter

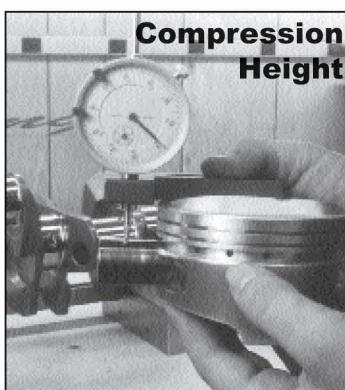

EVERYTHING You NEED IN ONE CONVENIENT KIT!

Blueprinting was a very expensive, time-consuming prospect before T&D developed the ingenious Universal Engine Blueprinter. There is no longer the need for a dozen or more expensive tools because this kit performs the functions of all of them. The T&D Universal Engine Blueprinter includes a precision dial indicator, three extension tips, a bridge, two sets of legs, a special L-shaped fixture, six setup gauges, hardware and detailed instructions. With these components in various combinations engine builders can accurately measure many critical engine dimensions, including the following: Piston deck clearance; Crankshaft centerline-to-deck; Crankshaft stroke; Camshaft lift functions; Piston dome height; Compression height; Connecting rod length; Pushrod length and many more. The complete package comes in an impact resistant foam-lined 8"x18" carrying case.

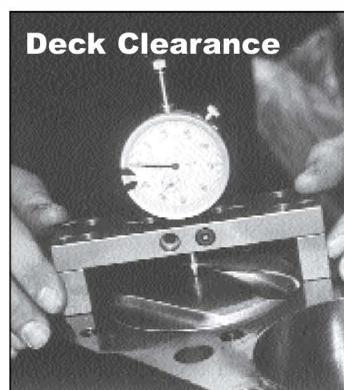

11030 Universal Engine Blueprinter Kit

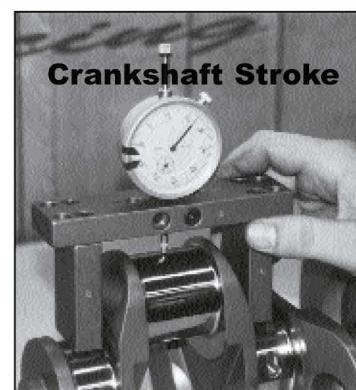

Camshaft Lift

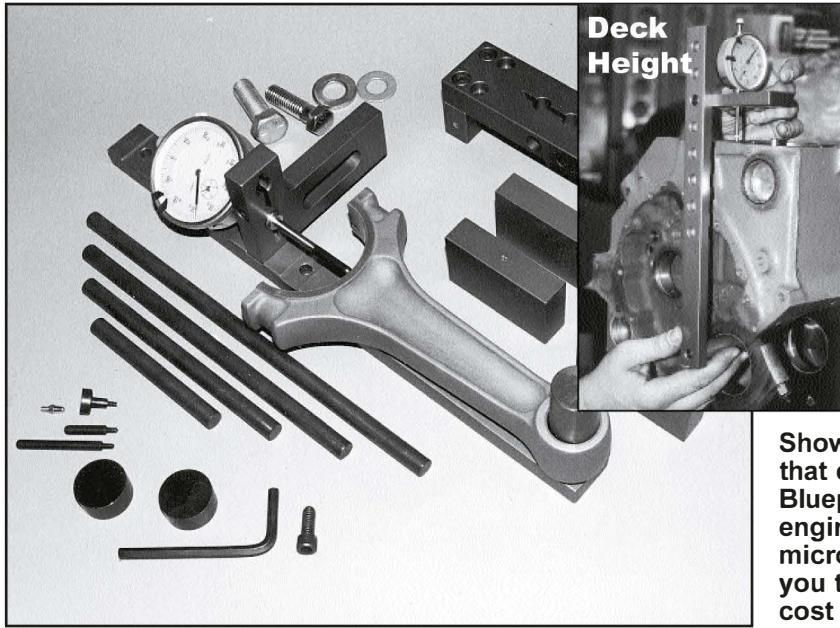

Compression Height

Deck Clearance

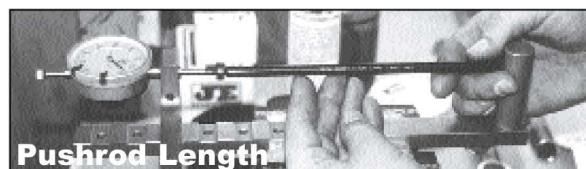

Crankshaft Stroke

Deck Height

Connecting Rod Length

Pushrod Length

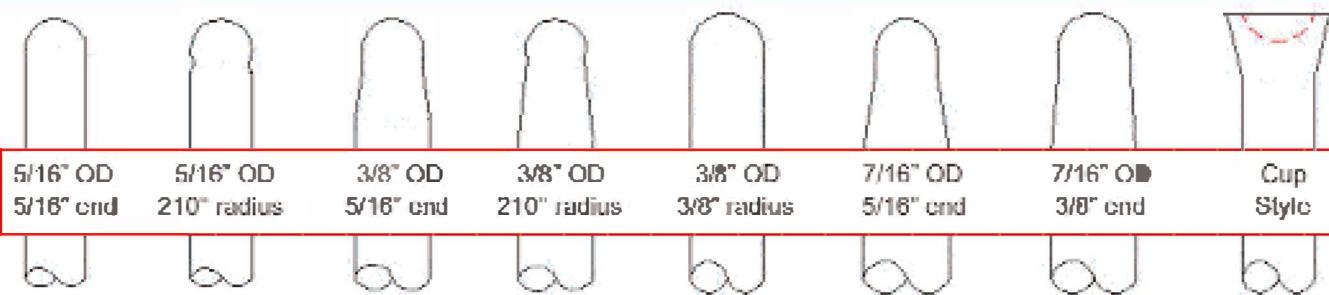

Shown here are just a few of the important functions that can be performed with a T&D Engine Blueprinter Kit. When used with other standard engine building tools (degree wheel, calipers, micrometers, bore gauge, etc.), this kit will allow you to check most dimensions at a fraction of the cost of traditional inspection equipment.

PUSHRODS

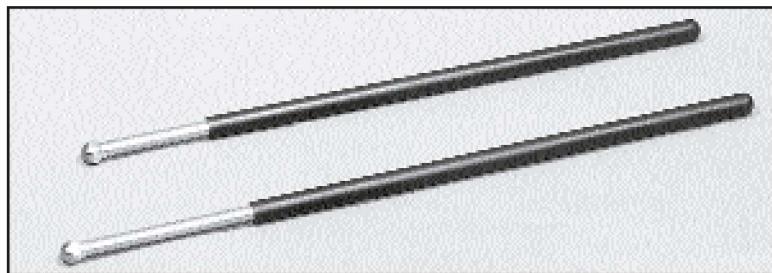

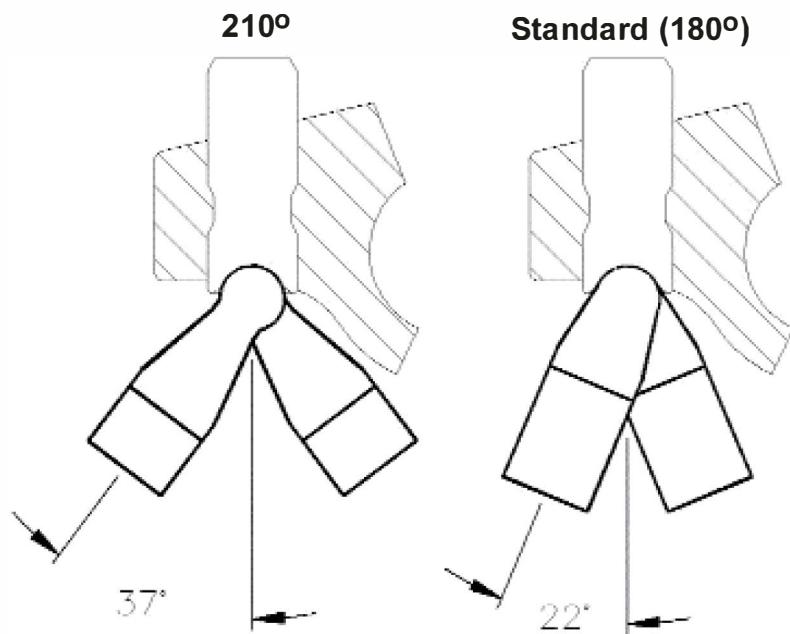

So that customers don't compromise valvetrain dependability with inferior pushrods, T&D Machine Products now offers the highest quality pushrods available for every application. T&D one-piece forged pushrods are made from mil-spec .080" wall seamless D.O.M. chromoly tubing and are 100% Zygo tested for material defects. T&D pushrods feature centerless ground shafts, while the critical ball end of the pushrod is CNC profiled to provide a more accurate ball radius and finish, thereby assuring superior compatibility with adjuster screw and lifter mating surfaces. T&D can handle specialty pushrod requirements, whether it's a 210-degree radius, single or double elliptical, heavy-wall or ball-cup pushrod. These are the same pushrods used by many of the highest level racing teams worldwide and ensure the dependability and quality expected from T&D Machine Products.

Available ends/styles

T&D Machine Products offers both 180-degree and 210-degree ends on our one-piece forged pushrods. Most applications are well suited for 180-degree pushrods. However some applications, those in which there is a high degree of pushrod angularity at the adjuster screw at any time during the lift cycle will require a pushrod that has a 210-degree radius on the tip. This additional clearance under the tip (see diagram) prevents the side of the pushrod from coming into contact with the bottom edge of the adjuster screw which can result in severe valvetrain malfunction.

Pushrod Length Checker

Simple yet accurate way to check rocker geometry and get the correct length pushrods the first time. T&D adjustable pushrods are 5/16" diameter with a full inch of adjustment.
