WHAT IS HNBR?

Hydrogenated Nitrile Butadiene Rubber (HNBR), also known as Highly Saturated Nitrile (HSN), is special class of nitrile that has been hydrogenated to increase saturation of the butadiene part of the carbon polymer for greater chemical resistance, more thermal stability and greater tensile strength.

HNBR can meet application temperatures that are between -50°C and 165°C.

HNBR nitrile o-rings have excellent resistance to petroleum oils and sour gas.
