| Country are proud to offer a high quality product at the industries most competitive pricing. Thank you for your confidence in us, and our product. Make sure to use locktite on all new and stock hardware associated with this installation. Torque Settings | It is the customers responsibility to make sure that a re-torque is performed on all hardware associated with this suspension system after the first 500 miles of installation. It is also the customers responsibility to do a complete re-torque after every 3000 miles or after every off road use. |
| 5/16"15—18 ft lbs.3/8"28—32 ft lbs.7/16"30—35 ft lbs.1/2"65—85 ft lbs.9/16"85—120 ft lbs.5/8"95—130 ft lbs.3/4"100—140 ft lbs. | It is the responsibility of the customer or the me- chanic to wear safety glasses at all times when per- forming this installation. It is the customers/installers responsibility to read and understand all steps before installation begins. OEM manual should be used as a reference guide. The Tuff Country EZ-Ride Suspension product safety label that is included in your kit box must be in- stalled inside the cab in plain view of all occupants. It is the responsibility of the installers to make sure that the rear view mirror hanger is hung from the rear view mirror. The rear view mirror hanger has instructions on proper post installation procedure. |

| of such product must be prepaid by the customer under this warranty. | |
| | |

Special Note: This box kit is used on 2", 3" or 4" kits, it includes the front and rear U-bolts, front and rear brake line extensions, front and rear spring eye bolts and all necessary hardware.

lf you are installing a 2" Tuff Country EZ-Ride Suspension on your vehicle, please read the following:

uff Country EZ-Ride Suspension offers two styles f front springs, a Heavy Duty spring and a EZ-Ride pring. If you have not already ordered your front prings, please contact Tuff Country or your local uff Country dealer and order (2) 18270 (Front EZide Springs) or (2) 18271 (Front Heavy Duty prings). Also Chevy/GMC offers (2) different length ear springs, a 52" rear leaf spring and a 56" rear leaf pring. If the vehicle that you are working on has a 2" rear leaf spring, and you have not already rdered your rear leaf springs, please contact Tuff ountry or your local Tuff Country dealer and order 2) 19270 (Rear 52" EZ-Ride Spring). Unfortunately uff Country EZ-Ride Suspension does not offer a 6" rear leaf spring. Also, Tuff Country EZ-Ride uspension recommends running a 32" x 10.50" tire or maximum tire clearance. Special Note: This tire ize in not 100% accurate due to variations in wheel ridth, wheel off set, tire diameters and driving abits.

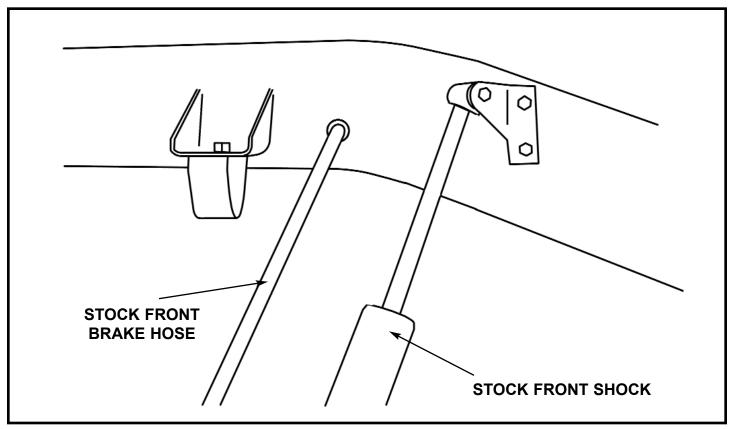

If you are installing a 3" Tuff Country EZ-Ride Suspension on your vehicle, please read the following:

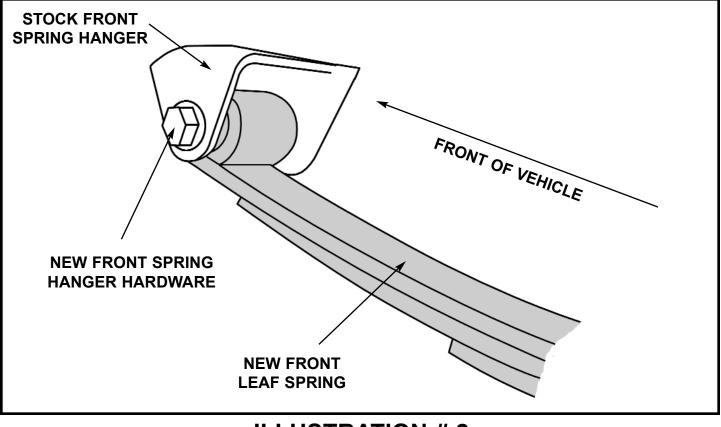

uff Country EZ-Ride Suspension offers two styles f front springs, a Heavy Duty spring and a EZ-Ride pring. If you have not already ordered your front prings, please contact Tuff Country or your local uff Country dealer and order (2) 18370 (Front EZide Springs) or (2) 18371 (Front Heavy Duty prings). Also Chevy/GMC offers (2) different length ear springs, a 52" rear leaf spring and a 56" rear leaf pring. If the vehicle that you are working on has a 2" rear leaf spring, and you have not already rdered your rear leaf springs, please contact Tuff ountry or your local Tuff Country dealer and order 2) 19370 (Rear 52" EZ-Ride Spring). Unfortunately uff Country EZ-Ride Suspension does not offer a 6" rear leaf spring. Also, Tuff Country EZ-Ride uspension recommends running a 32" x 12.50" tire or maximum tire clearance. | If you are installing a 4" Tuff Country EZ-Ride Suspension on your vehicle, please read the following: | and passenger side. Next remove the wheels and tires from both sides. |
|--|--|
| Tuff Country EZ-Ride Suspension offers two styles of front springs, a Heavy Duty spring and a EZ-Ride spring. If you have not already ordered your front springs, please contact Tuff Country or your local Tuff Country dealer and order (2) 18470 (Front EZ- Ride Springs) or (2) 18471 (Front Heavy Duty Springs). Also Chevy/GMC offers (2) different length rear springs, a 52" rear leaf spring and a 56" rear leaf spring. If you have not already ordered your rear springs, please contact Tuff Country or your local Tuff Country dealer and order (2) 19470 (Rear 52" EZ- Ride Spring) or (2) 19471 (Rear 56" EZ-Ride Spring). Also, Tuff Country EZ-Ride Suspension recommends running a 33" x 12.50" tire for maximum tire | 2. Working on the driver side, remove the stock shock from the stock upper and lower mounting point and save hardware for later re-installation. The stock shocks may be discarded. Special Note: New longer front shocks are needed, if you have not already ordered shocks, please contact Tuff Country or your local Tuff Country dealer and order the proper shocks. Tuff Country recommends using a 20" fully extended nitrogen gas shock when installing a 2" suspension system and a 23" fully extended nitrogen gas shock when installing a 3" or 4" suspension system. Repeat procedure on the passenger side. Special Note: If the vehicle that you are working on has the dual shock option, remove both shocks and discard. |
| clearance. Special Note: This tire size in not 100% accurate due to variations in wheel width, wheel off set, tire diameters and driving habits. Tuff Country EZ-Ride Suspension highly recommends installing a raised steering arm once a 4" suspension system has been installed. If you have not already ordered your raised steering arm, please contact Tuff Country or your local Tuff Country dealer and order part # 70100. | 3. Working on the driver side, disconnect the stock brake line at the frame mount. Let the stock brake line hang. Special Note: Brake fluid is going to leak out, it is a good idea to place a bucket under the vehicle to catch the brake fluid that will leak out. After the installation is complete, the brake lines will need to be bleed. Repeat procedure on the passenger side. See Illustration # 1 |
| Please Follow Instruction Carefully | 4. Working on the driver side, remove the stock cotter pin and caster nut that connects the stock drag link ball joint to the stock steering arm. If you are not going to replace |
| Before installation begins, drive and check to make sure there are no uncommon sounds and or frame damage. Also at this time measure from the center of the hub to the bottom of the fender well and record measurements below. | the stock steering arm with a raised steering arm, save the stock cotter pin and caster nut for later re-installation. Remove the stock drag link from the stock steering arm and let the stock drag link hang. Special Note: Tuff Country EZ-Ride Suspension highly recommends |
| Pre Installation Measurements: | installing a raised steering arm once a 4" suspension system has been installed. If you have not already ordered your raised steering, please |
| Driver Side Front: Passenger Side Front: | contact Tuff Country or your local Tuff Country dealer and order part # 70100. If you are installing a |
| Driver Side Rear: Passenger Side Rear: | 2" or 3" suspension system, you may skip this step. |
| At the end of the installation take the same measurements and compare to the pre-installation measurements. | 5. Place a pair of hydraulic floor jacks under the front axle. Place one hydraulic floor jack on the driver side and one on the passenger side. |
| Post Installation Measurements: | 6. Working on the driver side, remove the stock U-bolts from the stock location. The stock U-bolts and hardware may be discarded. Repeat procedure on the passenger |
| Driver Side Front: | side. |
| Passenger Side Front: | 7 Corofully lower down on both budgetie floor is the st |
| Driver Side Rear: Passenger Side Rear: Front End Installation: | 7. Carefully lower down on both hydraulic floor jacks at the same time approximately 5". This will allow enough room for the new front springs to be installed into the stock location. |
| | |
| 1. To begin installation, block the rear tires of the vehicle so that the vehicle is stable and can't roll backwards. Safely lift the front of the vehicle and support the frame with jack stands. Place a jack stand on both the driver | 8. Working on the driver side, remove the stock spring from the stock location. The stock front spring, stock front spring hanger hardware and stock front spring shackle hardware may be discarded. Repeat procedure |

| on the passenger side. | under the front differential. |
|---|---|
| 9. Locate the new front leaf springs. Working on the front and rear eyelet's of the front springs, remove the new sleeves and bushings from each end and set a side for later re-installation.10. Locate the new polyurethane lube packs. Spread the | 5/16" x 1" bolts, (4) $5/16$ " flat washers and (2) $5/16$ " unitorque nuts. Working on the driver side, secure the new brake line extending bracket to the stock location and secure using the new $5/16$ " x 1" bolt and hardware. Torque to 18 ft lbs. Make sure to use thread locker or |
| new polyurethane over the new bushings that were removed from step # 9 and re-install them back into the new front spring assembly. Make sure to re-install the new sleeves. Special Note: Make sure to use the new polyurethane lube packs prior to inserting the new bushings back into the new front springs. This will increase the life of the bushing, prevent squeaking and help with ride quality. | locktite on these bolts. Repeat procedure on the passenger side. 18. Working on the driver side, move the stock hard brake line located in the inner part of the frame rail under the stock frame. Reconnect the hard line and the soft line back together around the new brake line extending bracket that was installed in step # 17. Repeat procedure |
| 11. Locate the new front spring eye hardware. Working | on the passenger side. See Illustration # 6 |
| on the driver side, install the new front spring into the stock location and secure using the new spring eye hardware. Make sure to use thread locker or locktite on these bolts. Torque the front spring eye hanger hardware to 120 ft lbs. Special Note: Do not torque the front spring eye shackle hardware at this time. Once the vehicle is lowered to the ground, the front spring eye shackle will be torque to 40 ft lbs. Repeat procedure on the passenger side. | |
| See Illustration # 2 / Front Spring Hanger See Illustration # 3 / Front Spring Shackle 12. Carefully raise up on both hydraulic floor jacks at the same time until the newly installed front springs seat properly to the stock front spring perches. 13. Locate (2) new 5/8" x 3" x 7 5/8" Round U-bolts, (4) 5/8" U-bolt High Nuts and (4) 5/8" U-bolt Washers. | installing a 3" or 4" suspension system. If the vehicle that you are working on has the dual shock option, Tuff Country recommends using a 23" fully extended cellular gas shock for the auxiliary shock when installing a 2" suspension system and a 26" fully extended cellular gas shock for the auxiliary shock when installing a 3" or 4" suspension system. |
| Working on the driver side, install the new U-bolts into the stock location and secure using the new U-bolt high nuts and washers. Torque to 130 ft lbs. See Illustration # 4 | |
| 14. Locate (1) new 5/8" x 3" x 7 5/8" Round U-bolt, (1) new 5/8" x 3 1/2" x 9 5/8" Round U-bolt, (4) 5/8" U-bolt High Nuts and (4) 5/8" U-bolt Washers. Working on the | |
| passenger side, install the new 5/8" x 3 1/2" x 9 5/8" round U-bolt into the stock location around the stock | Front End Installation Complete |
| front differential inside location. Secure using the new U- bolt high nuts and washers. Secure the new 5/8" x 3" x 7 | |
| 5/8" round U-bolt into the stock outside location. Secure using the new U-bolt high nuts and washers. Torque to 130 ft lbs. See Illustration # 5 | 22. To begin installation, block the front tires of the vehicle so that the vehicle is stable and can't roll forward. Safely lift the rear of the vehicle and support the frame with a pair of jack stands. Place a jack stand on both the driver and passenger side. Next remove the wheels and |
| 15. Working on the driver side, re-install the stock drag link back into the stock steering arm. Secure using the stock caster nut and cotter pin that was removed from step # 4. Special Note: If you are installing a 2" or 3" suspension system, you may skip this step. | tires from both sides. 23. Locate (1) rear brake line extending bracket, (1) |
| 16. Carefully remove both hydraulic floor jacks from | for later re-installation. Secure the new brake line bracket |

| Special Note: Make sure to use thread locker or lock tite. Next, attach the stock brake line bracket to the newly installed brake line bracket and secure using the new 5/8" night nuts and washers. Torque to 16 ft. lbs. See Illustration # 7 Special Note: With a suitable cutting tool, cut off the excess U-bolt threads on all (4) rear U-bolts. Place one jack stand on the driver side and one on the passenger side. Raise up on both hydraulic floor jacks at the same time until they make contact with the rear axle. Working on the driver side, remove the stock shock and ware for later re-installation. Repeat procedure on the passenger side. Working on the driver side, remove the (2) stock rear axle. Working on the driver side, remove the (2) stock rear installation. Repeat procedure on passenger side. Working on the driver side, remove the (2) stock rear axle. Working on the driver side, remove the (2) stock rear axle. Working on the driver side, remove the (2) stock rear axle. Working on the driver side, remove the (2) stock rear axle. Working on the driver side, remove the (2) stock rear axie. Working on the driver side, remove the (2) stock rear axie. Working on the driver side, remove the (2) stock rear axie. Chower down approximately 5". Special Note: Make sure that all step related with the front and rear end were performed properly. Check and double check to make sure that all step related with the front and rear end were performed properly. Check and double check to make sure that all step secifications. Use the torque sheet at the beginning of the installation manual. Lower down approximately 5". Special Note: Make sure not over extended any brake lines or hoses when lowering the axle. This will allow you enough room for the new rear springs to be installed. | | |
|--|---|---|
| axie. Place one jack stand on the driver side and one on jacks at the same time until they make contact with the rear axie. 22. Working on the driver side, remove the stock stock and save the stock hardware for later re-installation. 23. Working on the driver side, remove the stock stock and save the stock hardware for later re-installation gas shock when installing a 2²⁰ or 3³ suspension system and a 30^o fully extended nitrogen gas shock when installing a 2²⁰ or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 2²⁰ or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 2^a or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 2^a or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 2^a or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 2^a or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 2^a or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 2^a or 3^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^o fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^a fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^a fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^a fully extended nitrogen gas shock when installing a 4^a suspension system and a 30^a fully extended nitrogen gas shock when installing a 4^a su | Special Note: Make sure to use thread locker or lock tite.
