

CROSS STEER® FOR 1933-1934 FORDS
8000680

Full refund will NOT be granted to any kits that are damaged, scratched, or altered in any fashion.

BEFORE YOU BEGIN:

Our rack and pinion kit is designed to replace traditional cross steering that utilizes original, or aftermarket steering boxes (such as Vega). **This unit is specifically designed for 1933-1934 style Fords only.** Frames that have been modified or applications that we have not cataloged must be measured to assure proper fit and function.

DUE TO VARIABLES OUTSIDE OUR CONTROL THESE KITS MAY NOT FIT ALL APPLICATIONS. ALSO, PLEASE VERIFY KIT WILL FIT YOUR APPLICATION BEFORE ALTERING VEHICLE.

Kit Contents:

#	Part Number	Description	Quantity
1	8000480	Cross Steer Rack	1
2	8020590	Cross Steer Bracket	1
3	240510	Tie Rod End Tube	1
4	230540	5/16"-18 x 3 Buttonhead Stainless Screw	3
5	230550	5/16"-18 x 1/2 Buttonhead Stainless Screw	2
6	120400	11/16 Right Jam Nut	1
7	620220	Mounting Kit	1

1. EXAMINE YOUR EXISTING STEERING

Before starting the rack and pinion installation, examine your existing steering, to assure that your suspension was correct to begin with. **Figure A** and **C** show the drag link rods in their proper location. Note that each is parallel to the axle and to each other, and each is equal height from the ground. If these bars are not as pictured, steps should be taken to position the new mounting bracket so that they are as pictured.

The mounting bracket was developed using several chassis manufacturers specifications, this does not mean that there aren't slight differences from one to the other. The bracket in our standard kit is made with a 96 degree angle between the frame and the axle. You should verify this dimension before installing the bracket (**see figure B**). This kit is designed to replace Vega steering boxes with a 6" straight pitman arm.

2. REMOVE EXISTING STEERING

Before removing any components position the cars front wheels and steering wheel in the straight ahead position. Secure the wheel so it does not move (tying a rope to the wheel and fastening it to a stationary object). Measure the distance between the inside of the front wheel (back of the rim, half up from the ground) to the frame on both sides of the front end. Use these measurements as a reference, as to the wheels being straight. Remove right side outer tie end (use a puller). Unbolt steering box, and remove it and the tie rod tube. Remove the old tie rod ends from your tie rod tube and the pitman arm. Determine which of these has left hand thread and use it with the new rack. (Unless replacing)

3. RACK AND PINION INSTALLATION

The rack and pinion will be in its center position when it is purchased. A paint mark indicates this position; you can verify the center position by measuring the rack from the rail side of the bracket to end of the left side rack bellow. This dimension be should be 2.125". Bolt rack and bracket back in the same spot the old steering box was, or position the bracket in the desired location and attach to the rail by welding or bolting. Screw the outer tie rod and jam nut in the tie rod tube until it stops. Equally adjust the tie rod tube so that there is the same amount of threads showing on both the inner and outer end, and the outer end stud is in line with the steering-arm hole. Remember there is an inner end (ball joint) under the rubber boot, this is will travel, it is stiff because the unit is brand new. Insert the outer tie rod in the steering arm and torque castle nut to normal specifications.

Check toe measurement taken earlier. If measurement is different adjust tie rod tube until it is the same as earlier. Locktite and tighten both jam nuts.
