

Saab HVAC Blend Door Lever Repair Kit

Part# 12 765 865-PRM

OEM Design

The plastic actuating arms for the heater blend flaps on Saab 9-5 models often become brittle and crack. These parts were never supplied by Saab as replacement pieces, so in the past a repair required replacing the entire heater box assembly and the associated labor at very high cost.

Problems

- Heat cycling between air conditioning and heater use eventually weakens the original plastic blend flap levers
- HVAC system failure profoundly affects passenger comfort

ÜRO Solution

ÜRO Parts has developed a repair kit for this problem, replacing the broken stock plastic HVAC Blend Control Lever with a premium aluminum piece. This dramatically cuts labor times and reduces the associated parts expense of replacing the whole heater box assembly.

Advantages

- Reduces repair labor by 9+ hours
- Reversible lever can be used on left or right side of heater box
- Lifetime warranty

Vehicle Applications

1999-2008 Saab 9-5 (LH/RH)
