

Cup Holder Installation Instructions

Please read these instructions carefully before installing this cup holder.

This Kit Contains:

- One Cup Holder Base Unit.
- One Small cup adapter ring.
- One Large cup adapter ring.

Installation:

1. Empty contents from your car's door pocket.
2. Loosen the three thumbscrews on the back of the base unit.
3. Place base unit over the top lip of the door pocket until it rests on the top lip.
4. Tighten the two top screws until snug. Do not over-tighten.
5. Now tighten the bottom screw until snug. Do not over-tighten.
6. With the door closed, check the clearance between the door and the base unit. If the base unit comes in contact with the seat, loosen the screws and slide the base unit forward until there is adequate clearance, then re-tighten the screws.
7. The adapter rings can be placed into the base unit to accommodate a wide variety of cup sizes. The rings are tapered to fit into the base unit. Be sure to install the rings with the narrow end down. You may store the rings in the door pocket when the rings are not in use.

Caution: To avoid spilling, remove any containers before opening or closing doors!
