

Porsche Sun Visor Mounts

Part# 964 731 319 40-PRM, 964 731 320 40-PRM, 964 731 319 00-PRM, 964 731 320 00-PRM

OEM Design

The front sun visor pivots used on many Porsche models consists of a steel pin embedded in a plastic base housing. This plastic housing cracks over time, causing the pin to loosen and the visor to fall.

Problems

- Age and exposure to heat and UV light weakens and embrittles the plastic base
- Visor position-holding capability is lost when the housing cracks and pivot pin loosens, preventing visor from remaining in the "flipped up" position

ÜRO Solution

ÜRO Parts improved the design by using a heavy-duty aluminum base that mimics the original part in look and fitment. The ÜRO mount is much stronger than the plastic OE version, yet is substantially less expensive.

Advantages

- Aluminum housing material is much stronger than plastic, and is impervious to UV light, summer heat, and winter cold
- Restores visor positioning capability
- Black powdercoat finish
- Lifetime warranty

Vehicle Applications

1965-1998 Porsche 911, 912, 914, 944, 964, 993
