**SUBJECT: 800050 & 800060 Series Leaf Spring Shims**

**NOTE:** Leaf spring shims should be installed by someone with a strong aptitude in leaf spring suspension. If you are unsure on how to use and install these shims, it is best if you refer to a professional.

1. These shims are designed to bolt into the leaf pack through the cross pin in the springs.
2. If your cross pin is not long enough to fit through the shim, you will need to get a longer pin
3. Cross-pin size is 5/16". If you have a larger pin size, you will need to drill out the pin.
