

1999 - 2004 SUBARU IMPREZA WRX REAR DYNALITE BIG BRAKE KIT

Kit Features:

Designed to compliment Wilwood's **Subaru Impreza WRX** front big brake kit, this new generation **Rear Disc Brake Kit** provides outstanding holding power with an uncluttered look that is easy to install*

Every **Subaru Impreza WRX Pro Series** rear brake kit gets the powerful clamping force from a pair of billet four-piston Dynalite calipers. Calipers come in black anodized finish with engraved Wilwood logo. The latest edition of the billet Dynalite features stainless steel anti-rattle plates for quiet running and longer wear in the caliper bridges.

For cool running and increased stopping power, each kit includes large diameter, competition rated vented iron brake rotors. Choose drilled and slotted rotors to match the high tech look of the SRP front rotors, or the smooth face rotors to match the competition GT front rotors.

PolyMatrix brake pads come in the low dust, low-noise "Q" compound, or the higher friction value "E" pads for the demands of track day and competition events.

Use this rear kit in conjunction with our **Subaru Impreza WRX** heavy duty Superlite 6 piston front kit for the ultimate look in contemporary big brake style with unmatched performance from race-born components.

*This kit is designed for use on cars originally equipped with rear disc brakes. Some Modifications are necessary to the rear OE caliper mounting brackets and removal of the stock dust shields. Some additional tools (like grinding equipment and files) may be necessary. Comprehensive installation instructions are included with every kit.

NOTE: Original parking brake clevis and cable are retained and used in conjunction with this kit.
