

Winhere Painted Rotor

Unprotected Rotor

Which rotor would your customers want on their vehicle?

With wheel sizes only getting bigger, corrosion protection is becoming a more important factor to the installer and consumer. As a leader in the market, Winhere has set the tone...manufacturing a standard rotor, with all visible, non-friction surfaces, painted with a durable gray paint to resist corrosion and keep the "OE" look. We now offer this painted product on 80% of our standard product line. When most manufacturers are selling a painted rotor as a "premium" product, Winhere is now manufacturing a painted rotor (G3000) at a "standard" rotor price to compete with others so called "premium" rotors.

A Winhere exclusive, ULTRAHC is a true premium, high carbon and coated rotor.

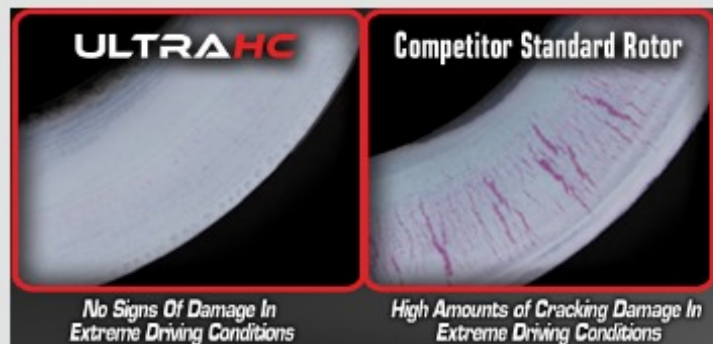

ULTRAHC rotors are manufactured to exacting standards. The **ULTRAHC** product line consists of Certified High Carbon™ content which provides the best quality for performance and durability.

ULTRAHC brake rotors provide the best performance for today's driving conditions. Born from racing technology, high carbon rotors come standard on many luxury and high performance vehicles. This high quality rotor provides better performance and safety for all vehicles under any driving conditions.

ULTRAHC rotors contain a higher carbon content than standard rotors (G3000) which in turn helps thermal stability. There are many well documented advantages to using high carbon as opposed to standard carbon content (G3000).

ULTRAHC rotors provide quiet, safe and smooth braking performance with high resistance to judder (pedal pulsation), thermal cracking and brake pedal fade.

ULTRAHC rotors create a premium aftermarket brake rotor that is proven in its ability to perform under high heat and load.

ULTRAHC BENEFITS

- Quiet Braking Performance
- Reduces Thermal Judder
- High Resistance To Heat
- Safer/Smother Braking
- Advanced Metallurgy
- OE Internal Vane Design
- Machine Balanced
- High Resistance To Cracking
- Longer Brake System Life
- Extreme Resistance To Pulsation
