

# YAKIMA

# 12 x 100 Fork Adapter **US**

**USE ON FORKS WITH 100mm HUB SPACING ONLY.**

- 1 REMOVE FRONT WHEEL:**  
Completely unthread and pull out the thru-axle skewer.

*Different manufacturers have different methods of wheel removal, follow your fork manufacturer's directions.*

- 2 INSTALL FORK ADAPTER:**  
*Attach the FORK ADAPTER while bike is still on the ground.*

- Slide the FORK ADAPTER between fork drop outs. Slide axle back through fork dropouts, and through the FORK ADAPTER.
- Completely tighten and close the thru-axle lever as you would if you were installing your front wheel.

*FORK ADAPTER legs must run parallel with the fork leg, unless you are running several bikes on your rack. Conflicting handlebar heights require the FORK ADAPTER to be rotated (maximum of 180°).*

*This figure may differ from your fork. Follow your fork manufacturer's directions for wheel removal, axle and axle bolt location and tightening.*

- 3 ATTACH TO FORK-MOUNTED BIKE RACK**
- Check the thru-axle is tight and the FORK Adapter is securely attached to your fork.
  - Attach the FORK ADAPTER onto your fork-mounted rack. (Follow the manufacturer's directions on tightening down the quick release before driving away.)

*Be sure FORK ADAPTER and bike are both mounted securely to your bike rack before driving.*

- 4 TO REMOVE FORK ADAPTER**  
*(Do not leave FORK ADAPTER attached to your rack.)*

- Remove the bike from your rack with the FORK ADAPTER still attached to your fork.
- Set the bike on the ground, open and unthread the thru-axle.
- Slide out the axle from the FORK ADAPTER and remove the FORK ADAPTER.
- Insert your front wheel; securely tighten the thru-axle before riding.

- 5 BEFORE RIDING:**

- Check that your thru-axle is tight and your front brake works properly.
